

ABSTRACT OF THE DISCLOSURE

A showerhead assembly has a tubular shaped spray head and a longitudinal axis. The tubular shaped spray head has
5 several apertures located along the longitudinal axis. The tubular shaped spray head is connected to a water source for introducing water in the tubular shaped spray head. The showerhead assembly also has a housing for supporting the tubular shaped spray head on a surface. Water
10 traverses through the tubular shaped spray head for spraying beams of water through the apertures.
